

Nicknamed the “Yellow Peril” thanks to its somewhat tricky ground handling characteristics, the Stearman is one of the most easily recognized aircraft. Its simple construction, rugged dependability and nimble handling made the Stearman much loved by those who flew and trained on it. The Stearman Kaydet, as it was officially named, was the only American aircraft used during World War II that was completely standardized for both Army and Navy use as the PT-13D (Army) and N2S-4 (Navy). Sold by the thousands after World War II, the Stearman has had a long and full career as a trainer, crop duster and air show performer. The name “Stearman” is so widely known that it has become the generic name for almost all currently flown biplanes. It is truly a “classic.”

The famed Stearman Model 75 has its roots in the earlier Model 70, which was chosen in 1934 as the U.S. Navy's primary trainer. At a time when biplanes were becoming a thing of the past, the Model 70 offered the fledgling pilot a steady and sturdy steed. Designed and built in only 60 days, the prototype Model 70 could withstand load factors much higher than were expected to occur in normal flight training. The U.S. Army and Navy tested the prototype in 1934. At the conclusion of these tests, the Navy ordered the aircraft while the Army decided to wait for the introduction of the improved Model 75 appearing in 1936. Over the next decade, the Army received nearly 8,500 Stearmans in five different variants. The difference among these versions were the engines fitted; Kaydets were fitted with Lycoming (PT-13), Continental (PT-17) or Jacobs (PT-18) radial engines. The U.S. Navy took delivery of their first Stearman (called the NS-1) in 1934. Powered with the obsolete but readily available Wright R-790-8 engine, the NS-1 proved its worth as a primary trainer. The Navy purchased several thousand of an improved model, the N2S. The N2S was built in five sub-variants, each variant being equipped with a different model engine. Additionally, the Canadian armed forces took delivery of 300 PT-27s, a winterized version of the PT-17.

A later, more powerful version of the Stearman, the Model 76, was purchased by Argentina, Brazil and the Philippines. The Model 76 featured wing mounted .30 caliber machine guns, a bomb rack between the landing struts and a single machine gun for the rear cockpit. These aircraft were used as light attack or reconnaissance aircraft. After World War II, many Stearmans were fitted with Pratt & Whitney 450 h.p. engines and utilized as crop dusters. These more powerful Stearmans are also commonly used for wing-walking or aerobatic routines at air shows.

The Cavanaugh Flight Museum's N2S-4 was assembled in 1985 from original Stearman components. The aircraft is painted in an authentic U.S. Navy paint scheme.

ENGINE	Continental W-670 220 h.p.
WING SPAN	32 feet, 2 inches
LENGTH	24 feet, 10 inches
HEIGHT	9 feet, 2 inches
MAX TAKEOFF WEIGHT	2,700 pounds
CREW	2
MANUFACTURED BY	Boeing Aviation
TOTAL BUILT	10,346
TOTAL EXISTING	2,136
FIRST BUILT	1933
MUSEUM'S AIRCRAFT BU	1085
MAXIMUM SPEED	104 m.p.h.
RANGE	260 miles
SERVICE CEILING	14,000 feet
